1. Use case description

Give a detailed description for each **business use case** identified. Do not include CRUD operations here.

Use case number	1.2
Use case name	Start and Manage Tutoring Class
Brief description	Tutor is logged into an active account with at least one scheduled class, and students are enrolled in that class.
Triggering event	A scheduled tutoring class's start time is reached, or the tutor chooses to begin the session.
Actor(s)	Tutor, Student
Preconditions	Tutor is logged into an active account with at least one scheduled class, and students are enrolled in that class.
Flow of activities	Tutor accesses the scheduled class from their dashboard. Tutor starts the class, activating it in the system. System generates/opens the integrated online meeting session for the class. System makes the active class visible and joinable to enrolled students. Tutor manages the class session (e.g., admits students, ends the class when complete). System logs the class's start and end times and updates the class status to "Completed" once ended.
